To guard your life from the storm and flood!

Are you able to save your important people's lives in times of crisis?

~Know the emergency signal of the storm and flood, and take actions ~

Kochi Prefectural Police

Firstly, get the information

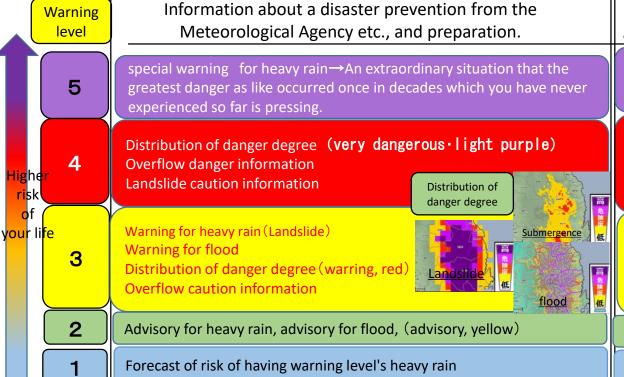

Is your house located in the region containing the risk of damage from the storm and flood?

If your house is located near seashore, a hillside, a slope of made land, rivers, or the place which used to be damaged by disasters, you have to pay particular attention to disasters

Information about a disaster prevention and action of protecting your life.

Disaster have already occurred!!

Do action of the best way of protecting your life!

Evacuation order (Emergency), Evacuation advisory It would be issued when damage by a disaster was expected and the risk of human damage became high, and furthermore when the situation became worse and the risk of damage increase extremely.

Evacuation preparedness Start evacuation for the elderly or the like

Those who take time to evacuate (the elderly, the disabled, babies and toddlers etc.)

This is issued several hours before getting into the storm area

This is issued from several hours to two hours before

Everybody need to be aware that danger of your life increased when warning level more than 3 is issued.

2 Next, take actions

Designated evacuation areas

When the risk of the disaster is approaching you,

Do you have any ideas when, where, and how you evacuate?

When?

You should evacuate in an early stage. (Before dark)

Especially the elderly and the disabled need more time to evacuate, taking it into consideration you should evacuate (have them evacuate)early

Where?

You should evacuate (have them evacuate) to the designated evacuation area near your house established by the local government

*Check the designated evacuation area beforehand. These are designated by each local government. And when the risk of storm and flood is approaching, there are cases the local government send information about the evacuation area to your cell phone as an emergency alert e-mail.

How?

You should not evacuate by yourself as much as possible. It would be safe to evacuate with your relatives or neighbors. Even if you lose a chance to evacuate, never give up and try a vertical evacuation. (It means moving to higher floors, to safer rooms farther from mountain side or soil in the house or building)

Rather than "I evacuated with effort but there was nothing in the end", You would better to think "It was good not to be involved in the disasters."

Guard your family member's lives and yourself together.
